Question No.	Answers
1.	b
2.	c
3.	a
4.	a
5.	b
6.	b
7.	b
8.	d
9.	a
10.	Given below
11.	Given below
12.	Given below
13.	Given below
14.	Given below

Answer: 10 Theorem describes the probability of an event, based on prior knowledge of conditions that might be related to the event.

Answer: 11 Z-score gives us an idea of how far a data point is from the mean. It indicates how many standard deviations an element is from the mean.

Answer: 12 A t-test is a type of inferential statistic used to determine if there is a significant difference between the means of two groups, which may be related in certain features.

Answer: 13 It is a way of expressing where an observation falls in a range of other observations.
